

Activity: Orchestrating microservices containers

1. Work individually. This assignment is due Wednesday August 31st, 2026 no later than 11:00 pm (23:00) on mycourseville (pdf only)
2. You will create docker-compose file to orchestrate the following components
 - a. todo-webapp (src=release-3.1) – map port: container 3000 to host 3000
 - b. todo (src=release-3) – set name to todo-service
 - c. todo-notification (src=release-1.1) – set name to notification-service
 - d. API Gateway (using NGINX) – map port: container 8000 to host 8000 – set name to api-gateway
 - e. Network name: todo-net
3. Todo, todo-notification, API gateway must be all connected to the same internal network
4. You must modify nginx configuration file as followed
 - a. Listen to port 8000
 - b. Point proxy from /todo/ to <http://todo-service:8000/>
 - c. Point proxy from /notification/ to http://notification-service:9000/
5. Prepare a set of slides in PDF containing the following information
 - a. Your docker-compose.yml
 - b. Screenshot when you run docker-compose up
 - c. Screenshot after all containers are running and you use command: docker ps -a
 - d. Screenshot of browser connecting to todo-webapp with some todo items

YOU MUST ALSO USING GRADER (URL is in MCV's assignment)
