

1. Screenshot when you perform step#3

Test your cluster with nginx as followed:

- Deploy an nginx on your cluster using the deployment file from <https://k8s.io/examples/application/deployment.yaml>
- Use kubectl to describe the deployment

```
(base) PS C:\Users\USER\Desktop\Software_def\act4> kubectl describe pod nginx-deployment
Name:          nginx-deployment-bf744486c-659wc
Namespace:     default
Priority:       0
Service Account: default
Node:          docker-desktop/192.168.65.3
Start Time:    Tue, 01 Sep 2026 19:14:19 +0700
Labels:        app=nginx
               pod-template-hash=bf744486c
Annotations:   <none>
Status:        Running
IP:            10.1.0.10
IPs:           IP: 10.1.0.10
Controlled By: ReplicaSet/nginx-deployment-bf744486c
Containers:
  nginx:
    Container ID:  docker://c015870274a64dd2a87810bfbc24cc5ead8bece710db1787a218064135febd0
    Image:         nginx:1.14.2
    Image ID:      docker-pullable://nginx@sha256:f7988fb6c02e0ce69257d9bd9cf37ae20a60f1df7563c3a2a6abe24160306b8d
    Port:          80/TCP
    Host Port:     0/TCP
    State:         Running
      Started:     Tue, 01 Sep 2026 19:14:30 +0700
    Ready:         True
    Restart Count: 0
    Environment:   <none>
    Mounts:
      /var/run/secrets/kubernetes.io/serviceaccount from kube-api-access-hjcdk (ro)
Conditions:
  Type                               Status
  PodReadyToStartContainers          True
  Initialized                         True
  Ready                              True
  ContainersReady                    True
  PodScheduled                       True
```

2. The deployment file that you create in step#4b and ingress file in step#4d
 - b. Create a deployment file of a pod with service of the following containers:
 - i. todo (release-2.1)
 - ii. redis

Note: you can use a docker-hub image: natawut/todo-service:release-2.1 and you must ensure that environment for REDIS_HOST

```
1  apiVersion: apps/v1
2  kind: Deployment
3  metadata:
4    name: todo-service
5  spec:
6    selector:
7      matchLabels:
8        app: todo-service
9    template:
10     metadata:
11       labels:
12         app: todo-service
13     spec:
14       containers:
15         - name: todo-service
16           image: natawut/todo-service:release-2.1
17           env:
18             - name: REDIS_HOST
19               value: "localhost"
20           resources:
21             limits:
22               memory: "128Mi"
23               cpu: "500m"
24           ports:
25             - containerPort: 8000
26         - name: redis
27           image: redis
28           ports:
29             - containerPort: 6379
30
```

d. Create ingress configuration file, apply the file, and show the ingress information

```
(base) PS C:\Users\USER\Desktop\Software_def\act4> kubectl apply -f .\ingress.yml  
ingress.networking.k8s.io/todo-ingress created
```

```
⦿ (base) PS C:\Users\USER\Desktop\Software_def\act4> kubectl describe nginx-ingress-controller  
error: the server doesn't have a resource type "nginx-ingress-controller"  
● (base) PS C:\Users\USER\Desktop\Software_def\act4> kubectl describe services nginx-ingress-controller  
Name: nginx-ingress-controller  
Namespace: default  
Labels: app.kubernetes.io/instance=nginx-ingress
