Activity 8: Multi-cloud and hybrid cloud architectures

Work in pairs. Prepare a presentation (pdf) with at most 6 slides for deploying
(1) Reg Chula and
(2) www.chula.ac.th
on the cloud.

For this activity, you may assume that all public cloud providers (i.e., Amazon, Google, Microsoft, etc.) have regions in Thailand.

Slide 1: Title slide with your names and student ID's.

Slide 2-3:
- Design of your final architecture for Reg Chula: hybrid? multi-cloud?
- Address all pro's and con's (think about all factors you need to be concerned with).
- Explain if there are still any remaining shortcomings of your final architecture compared to the current system on-premise (inside the university).

Slide 4-5:
- Design of your final architecture for www.chula.ac.th: hybrid? multi-cloud?
- Address all pro's and con's.
- Explain if there are still any remaining shortcomings of your final architecture compared to the current system on-premise.

Slide 6: Which final architecture was easier to design: Reg Chula vs. www.chula.ac.th? Explain why.

Helpful hints:
- Watch the playlist about reg chula on mycourseville.
